The quality of **LCD** panels has improved dramatically while at the same time costs have gradually come down.

## 14. How The Technology of LCD Displays Works

**LCD** screen technology is rather straightforward: **LCD** monitors are made of a substance that is permanently in a **liquid** state but has some properties inherent in **crystal** bodies. A **Liquid crystal display** is a passive device, which means it doesn't produce any light to **display** characters, images, video and animations.

## 15. LCD Liquid Crystal Display

**LCD** is also known as **Liquid Crystal display** and it is used for desktops and laptops. The system is also known as a flat panel **display**. In the **Liquid Crystal display** there are primary forms of the **liquid crystals**. Today, the **LCD** panel is replaced with LED but a lot of people are still using the devices or **displays** of
